## COVERS &amp; ACCESSORIES

## Boat Cover "SeaCover"

The 'SeaCover' is ideal to cover and protect your boat against rain, dust and sun when you don't use it. It combines high construction standards with high quality materials. Made from extra strong PA coated Polyester 300D for maximum water resistance, it features an elastic cord all around for ideal fit and double stitched seams for long lasting use. Additionally, it has non-scratching aluminium D-rings for extra hull protection. The 'SeaCover' can be used in fishing or recreational boats, inflatable or motorboats, with or without cockpit and rails. It is available in silver colour and in 7 sizes depending on the dimensions of the boat.

## USEFUL HINTS

## Maintenance and Cleaning

To keep the 'SeaCover' clean and protected when not in use Lalizas provides you with its storage bag. To extend the products' life clean it with a soft bristle brush and lukewarm water. NEVER use soap as it may damage the protective coating of the 'SeaCover'. ALWAYS leave to dry completely before storing it.

## Engine Covers

The "SeaCover" for engines are ideal for the protection against water, sun and dust. They are made from extra strong PA coated Polyester 300D for maximum water resistance and UV protection.

They are suitable for most types of outboard engines, from 2 to 300hp and are available in two different types. There are the covers which are suitable only for the top part of the engine (not the shaft) and feature an elastic cord all around for ideal fit to most types of outboard engines, and there are also the full body covers, which feature an elastic cord and a zipper so as to ensure the best possible engine's protection, including its shaft. You can find 7 different sizes of the covers for the top part of the engine and 3 different sizes for the full body covers. All "SeaCover" are supplied in silver colour.

The tables below show the different sizes of the "SeaCover". The dimensions refer to the length, the width and the height of the cover (Drawing 1). The horsepower given is approximate, and it is not the only factor that should be taken into consideration when choosing your cover. The type of the engine (2 stroke, 4 stroke), the length of the throttle grip, the brand of your motor and its production date should also affect your choice, as they differentiate the size of the engine.

To choose the most suitable cover for the top part of your engine, measure it as shown in the Drawing 2 and determine the dimensions that more closely match your model.

\*When calculating the height of the engine you should also include a part of the shaft, as shown in Drawing 2, in order to ensure that the engine will be covered completely underneath (apart from the shaft).

To choose the most suitable full-body cover for your engine, you should measure the engine's height (B) as well as its width (W). In order to calculate correctly the maximum height that the appropriate cover should have, you should deduct from the engine's height (B) half of its width (W).

For instance, if the height (B) of your engine is 210cm and its width (W) is 50cm, then the cover that you need should be 185cm (210cm-25cm) high. Therefore, in this case, the correct cover is cover 57331, which is 210cm high, as indicated in the relevant table.

### "Sea Tarpaulin" Protective Tarpaulin Cover

It can be used in various applications such as:

- Cover boats, cars etc.
- Tent on boats
- Cover equipment and machinery stored in outside areas
- Cover painted areas
- Camping
- Swimming-pool cover and many others

#### Characteristics of the 'Sea Tarpaulin'

- Extra strong Polyethylene
- Water resistant and weather proof
- Re-usable
- Washable
- UV resistant
- Laminated on both sides for maximum weatherproofing

### Boat Cover Support System

The Boat Cover Support System will ideally extend the life of your boat and cover. Easily installed and adjusted, it keeps water and debris from accumulating in the centre of the cover. The kit includes one telescopic aluminium pole (50cm to 116cm) that is positioned in the centre of your boat with a wide support on top, and polypropylene webbing straps, which are hooked from bow to stern. The Boat Cover Support System fits all covers for boats up to 7m.

#### Installation Instructions:

1. Position the strap centre point over the bow of the boat. The protective sleeves should be positioned so that the strap does not come in contact with the front edges of the boat.
2. Pull the straps evenly over the boat.
3. Weave the straps through the triangular support piece in an "under-over-under" pattern, so that the straps lay on top of the support.
4. Insert the pole into the triangular support piece and raise the pole to its highest point. Twist the pole sections to loosen and to tighten.
5. Hook the ends of the straps on the boat trailer.
6. Adjust the straps evenly so that they are tight and the pole stands upright.
7. Carefully pull the boat cover over the straps, so as not to push over the pole. The pole may need to be adjusted in height depending on the shape and size of your boat and its cover.
